Identifying the Issues

PLEASE RETURN

PUBLIC MEETINGS

The potential impacts of reserving water in the Missouri River Basin above Fort Peck Dam will be the topic of ten public meetings during mid-July. The public is encouraged to attend these meetings to help identify issues related to this major water allocation program. The meetings will be held at 7 p.m. at the places and dates shown below.

July 10	Fort Benton	Fort Benton Elementary School Auditorium
	Lewistown	Yogo Inn, Sapphire Room
July 11	Great Falls	Great Falls Public Library, Cordingley Room
	Roundup	Central Elementary School, Multipurpose Room
July 12	Helena	Lee Metcalf Building, Board Meeting Room 1520 East Sixth Avenue
July 13	Glasgow	Best Western Cottonwood Inn
July 18	Bozeman	Bozeman High School, Cafeteria
	Dillon	Western Montana College Office Classroom Building, Room 114 710 S. Atlantic (Parking in gym parking lot.)
July 19	Ennis	Ennis Town Hall
	Whitehall	U.S. Dept. of Agriculture, Meeting Room 405 W. Legion

If you cannot attend these meetings but still wish to submit comments on issues that should be discussed in an environmental impact statement, mail your comments by August 4 to:

MISSOURI BASIN WATER RESERVATION PROCEEDING

In 1985, the Legislature directed the Montana Department of Natural Resources and Conservation (DNRC) to initiate a proceeding to reserve water in the Missouri and Little Missouri river basins. A basin-wide system of water reservations is felt to be a strong basis for protecting Montana's interest in the flows of the Missouri River.

Due to the vast size of these basins, the proceeding has been split so that only reservations in the Missouri River Basin above Fort Peck Dam will be considered at this time. Final decisions on these applications are to be made by the Board of Natural Resources and Conservation (Board) before July 1, 1992. Water reservations in the remaining portion of the Missouri River Basin and in the Little Missouri Basin will be the subject of a separate proceeding.

Montana's water reservation law provides an opportunity to legally allocate water for future consumptive uses as well as for maintain-

ing instream flows to protect water rights, aquatic life, and water quality. Only public entities such as local governments, conservation districts, and state and federal agencies may apply for water reservations. Further a reservation cannot be granted if its use would adversely affect other water rights.

Water reservation applicants in the Missouri River Basin above Fort Peck Dam are required to file an application with the DNRC before July 1, 1989. Applications received by this deadline receive a July 1, 1985 priority date. Potential applicants include: 18 conservation districts to provide water to about 220 irrigation projects; 18 municipalities; the Department of Fish, Wildlife and Parks for instream flows on about 250 streams to protect fish, wildlife, and recreation; the Department of Health and Environmental Sciences for instream flows to protect water quality; the U.S. Bureau of Reclamation for a reservation to transfer water from the Missouri River into the Milk River to alleviate existing water shortages; and the U.S. Bureau of Land Management for reservations to protect fisheries and wildlife on 31 streams upstream of Canyon Ferry Dam. More details about these reservations can be found in the attachments to this brochure.

THE ENVIRONMENTAL IMPACT STATEMENT PROCESS

Montana law requires that an environmental impact statement (EIS) be prepared whenever actions of state government have the potential to cause major effects on the human or natural environment. The Board's decision regarding water reservations in the Missouri River Basin could "significantly affect the quality of the human environment" as defined by the Montana Environmental Policy Act. Therefore, DNRC is required to prepare an EIS that informs the public and other interested parties about all the known or foreseeable beneficial and detrimental effects of a proposed state action. Typically, an EIS includes a description of the environmental impacts likely to result from the proposed action, alternatives to the proposed action, and a comparison of short-term and long-term commitments of the state's natural resources.

The EIS process allows ample opportunity for the public to make its feelings known. These opportunities are discussed on the back panel of this brochure. The first step in preparation of an EIS is to gather public comments on the issues that should be addressed. At the ten meetings listed in this brochure, the public will be provided an opportunity to inform DNRC of the important issues surrounding water reservations in the Missouri River Basin. After these meetings, DNRC will use the comments to prepare a draft EIS which will be circulated to the public and other interested parties for comment. Comments will be accepted for at least 30 days following publication of the draft EIS. DNRC will also hold public meetings during the comment period to collect additional comments on the draft EIS. Based on these comments and any new information, a final EIS will be prepared. The publication of the final EIS represents the end of the impact assessment.

ing instream flows to protect water rights, aquatic life, and water quality. Only public entities such as local governments, conservation districts, and state and federal agencies may apply for water reservations. Further a reservation cannot be granted if its use would adversely affect other water rights.

Water reservation applicants in the Missouri River Basin above Fort Peck Dam are required to file an application with the DNRC before July 1, 1989. Applications received by this deadline receive a July 1, 1985 priority date. Potential applicants include: 18 conservation districts to provide water to about 220 irrigation projects; 18 municipalities; the Department of Fish, Wildlife and Parks for instream flows on about 250 streams to protect fish, wildlife, and recreation; the Department of Health and Environmental Sciences for instream flows to protect water quality; the U.S. Bureau of Reclamation for a reservation to transfer water from the Missouri River into the Milk River to alleviate existing water shortages; and the U.S. Bureau of Land Management for reservations to protect fisheries and wildlife on 31 streams upstream of Canyon Ferry Dam. More details about these reservations can be found in the attachments to this brochure.

THE ENVIRONMENTAL IMPACT STATEMENT PROCESS

Montana law requires that an environmental impact statement (EIS) be prepared whenever actions of state government have the potential to cause major effects on the human or natural environment. The Board's decision regarding water reservations in the Missouri River Basin could "significantly affect the quality of the human environment" as defined by the Montana Environmental Policy Act. Therefore, DNRC is required to prepare an EIS that informs the public and other interested parties about all the known or foreseeable beneficial and detrimental effects of a proposed state action. Typically, an EIS includes a description of the environmental impacts likely to result from the proposed action, alternatives to the proposed action, and a comparison of short-term and long-term commitments of the state's natural resources.

The EIS process allows ample opportunity for the public to make its feelings known. These opportunities are discussed on the back panel of this brochure. The first step in preparation of an EIS is to gather public comments on the issues that should be addressed. At the ten meetings listed in this brochure, the public will be provided an opportunity to inform DNRC of the important issues surrounding water reservations in the Missouri River Basin. After these meetings, DNRC will use the comments to prepare a draft EIS which will be circulated to the public and other interested parties for comment. Comments will be accepted for at least 30 days following publication of the draft EIS. DNRC will also hold public meetings during the comment period to collect additional comments on the draft EIS. Based on these comments and any new information, a final EIS will be prepared. The publication of the final EIS represents the end of the impact assessment.

WHAT HAPPENS AFTER THE EIS?

Once the final EIS is published, water right holders and the public will receive legal notice of the water reservation applications pending before the Board. Affected parties may then submit formal objections to any or all of the reservation applications. Once the objection period closes, a contested case hearing on the proposed reservations will be scheduled. A contested case hearing is an administrative legal proceeding similar to a trial but without a jury. A hearings examiner will conduct the contested case hearing for the Board. The applicants and parties which have filed objections must appear at the contested case hearing, where they may present their evidence and be cross examined under oath. Shortly after the contested case hearing, a proposed decision will be presented by the hearings examiner to the Board. The Board is required to make its decision to grant, grant in part, or deny the pending applications by July 1, 1992.

QUESTIONS ABOUT THE RESERVATION PROCESS

DNRC experience show that there are a number of common questions about water reservations. Several of these are answered below.

Question: Can instream flow reservations adversely affect pre-existing water rights?

Answer: Water rights with priority dates before July 1, 1985 cannot be adversely affected by the proposed reservations.

Question: Why not wait until the water adjudication process is complete before considering water reservations?

Answer: The law requires the Board to decide about water reservations on the Missouri above Fort Peck Dam by July 1, 1992. There is no legal requirement that the adjudication process be completed by this date.

Question: Can the Board modify a requested reservation, or can it only grant or deny?

Answer: The Board has flexibility to grant a smaller reservation than requested, to place conditions on a reservation, or to subordinate one reservation to another or to existing water use permits. The Board may not grant more water than is requested.

Question: Following the Board's decision regarding reservation requests, would legal avenues for appeal still be open if a person feels his or her water use is affected?

Answer: Yes.

Question: Why are state and federal agencies requesting reservations and not obtaining water use permits?

Answer: Montana law does not allow agencies to obtain water use permits to protect instream flows or to develop projects over a long period. However, the Legislature allows political subdivisions or agencies of the state or federal government to apply to reserve flows for future beneficial uses or to maintain a flow for instream use.

OPPORTUNITIES FOR PUBLIC PARTICIPATION

Public participation is an important part of the reservation process. Each stage of the process is tailored to solicit and use comments from the public. These stages include:

- Issue identification.
- Comments on the Draft Environmental Impact Statement.
- Participation in the final decision making process.

In the issue identification stage, interested parties can attend the public meetings listed in this brochure and speak in person, or they can submit written comments to DNRC. **This is the time for you to specify the type of information the environmental impact statement (EIS) should contain to fully address environmental and economic issues relating to the reservations.**

After the draft EIS is prepared, the public will be invited to comment on it. DNRC will hold public meetings to accept these comments, or comments may be mailed. Any new information obtained at this stage will be used in revising the draft EIS into a final EIS.

Following issuance of the final EIS, the Board will provide legal notice to all potentially affected water right holders and the public regarding the proposed reservations. People can then object to any or all reservations. A contested case hearing will follow. After the conclusion of this hearing and prior to July 1, 1992, the Board of Natural Resources and Conservation will make its final decision to grant, grant in part, or deny the proposed reservations.
